PROFILE

BS Information Technology student with experience in front-end and backend technology. Passionate about creating innovative digital applications and eager to continuously expand technical knowledge and skills.

PROJECTS

C++

2022

ATM SIMULATION SYSTEM

- Developed a simulated ATM system using a flash drive as a virtual ATM card. Implemented key functionalities including user authentication, balance inquiry, withdrawals, and other standard ATM operations. Gained hands-on experience with system design, file handling, and secure transaction processing, demonstrating problem-solving and practical application of programming concepts.

Python || Java

2023

Student Record Management

- Developed a system that performs CRUD operations using a text file as a database, demonstrating fundamental data management and storage techniques

JavaScript || Css || MySql

2024

Watch Ecommerce

- Developed a watch e-commerce platform with features for user-designed products, product management, and database integration. Created intuitive UI/UX designs using Figma, demonstrating practical application of design tools and front-end development skills. Implemented core functionalities without real payment gateways, focusing on system functionality, data handling, and user interaction.

Vite React || Supabase || TailwindCss (Ongoing)

2025

TechClinic

- Developing a Student Health Record Management platform with a focus on analytics-driven decision-making and effective storage management.

EDUCATION

Bachelor of Science in Information Technology

2022-2026

Technological University of the Philippines
